

COMPUTER OFFERING(S) PROPOSAL

April 22, 2024

OVERVIEW

1. Project background and description

This originally came about due to increased interest from institution members in various aspects of computer use (especially laptops and phones). Although there is a significant amount of understanding of information technology in general and computers in specific, there is still a great divide between what is generally known and what should be the baseline of general knowledge in this digital age. Much of the information that comprises the difference between the current general knowledge and the "baseline" can be easily taught.

In specific, this offering will cover most aspects of device use (for more specifics see the scope section) and attempt to bridge the knowledge gap so that all attendees have reached at least the "baseline" by the finish of this project.

This project may or may not include more than one offering, depending on demand. Other offerings may include, use of advanced software (such as Adobe products and Microsoft 365 products), iPad use, Malware detection and/or removal, and LINUX based systems.

2. Scope

This project will cover devices running MACOS (MACs and MAC laptops), Windows versions 7-11 - with emphasis on newer versions - (Window desktops and laptops), Android (most smartphones that are not iPhones, most tablets that are not iPads), iOS (iPhones and iPads). Note that iPads will not be covered extensively, as this would be better addressed in a separate offering. This offering will be comprised and/or explain the following:

- Basic use of computer desktops
- Laptop use including (but not limited to):
 - Daily use
 - Software specific issues
 - Backup software and backup procedures
 - Suggested software
 - Suggested schedules/procedures
 - Malware detection and removal
 - suggested software
 - for prevention
 - for detection
 - for remediation
 - brief information as this is best covered more extensively in another offering
 - Receiving remote assistance
 - Software
 - Procedures
 - Do's and Don'ts
- Smartphone use including (but not limited to):
 - Set up
 - Configuration
 - Common issues
 - Common applications (apps from the Play store or App store)
- Some tablet use information

3. Basic Requirements

Each person is required to have the following:

- Electronic device(s) for which they wish assistance
- Note taking ability (either on paper or electronic device)

- A desire to learn more about said device(s)

4. Deliverables

At the end of this offering people should be able to set up, configure and use any device that was with them during said offering (devices left home, acquired afterwards, etc. cannot be reasonably covered).

Any person taking part can expect to receive further aid from the instructor by contacting him either by email or by cell phone.

Remote assistance of computer problems on supported devices will be provided by the instructor.

5. Specific exclusions from scope

Some operating systems are beyond the scope of this offering, as are some problems. Although these will be dealt with as best as possible, it is not in the purview of this offering to address such items as mastery of a specific operating system or operating systems not covered, such as LINUX.

6. Implementation plan

This will be available for a limited time to a limited number of attendees. All information in this document and the offering in general, assumes that the attendees come equipped with the proper items, such as a laptop, smartphone, or tablet. This will be rolled out at the discretion of the administration of the institution.

7. High-level timeline/schedule

Scheduling of this offering is at the discretion of the administration of the institution. The scheduling should take into account the presenters' availability.

APPROVAL AND AUTHORITY TO PROCEED

We approve the project as described above, and authorize the team to proceed.
